COLLEGE OF ENGINEERING

Cooperative Education and Internship Program

“The degree lands the interview;
co-op lands the job.”

Ryan Heller '07, Mechanical Engineering

An education that works with you, for you

The College of Engineering’s Cooperative Education & Internship Program gives students the opportunity to combine their classroom learning with real-world experiences.

With a co-op semester or an internship, you can see how your classroom learning applies to the kinds of projects you’ll work on as a professional. Your education becomes more relevant and more interesting.

The benefits of co-op

Students who choose to participate in co-op welcome the chance to see their education at work. They like the fact that they are earning a good salary—one that helps with college costs—while they gain self-confidence and a sense of the workplace.

And they know that the experience will strengthen their resume—co-op students generally receive more job offers, at higher salaries, upon graduation.

Where you can work

The employers who offer UMass Dartmouth engineering students co-op assignments are established, highly-regarded companies, providing students with challenging, diverse work.

Among our co-op participants are:

Bose Corporation
Fidelity Investments
Hewlett Packard
Johnson & Johnson
Pratt & Whitney

Camp, Dresser & McKee
Hasbro
Intel
Lockheed Martin
Raytheon
