Installation and use of the UMass Dartmouth VPN Client (for Windows 11)

This document will help you install and use the Check Point Capsule VPN Client on Microsoft Windows 11 machines.

Note: The following images were taken with Windows 11, version 21H2. If you are using a different version of Windows, your screen may appear differently. Additionally, **the app installation is user specific**, so please be logged into your appropriate account before following the steps below.

Installing the VPN client

1. Access the Microsoft Store on your machine by clicking on the Microsoft Store icon located on your taskbar. Note, if it is not here, you may need to search for “Microsoft Store.”

4. Once on the application page for the VPN client, click on the “Get” button to download and install the VPN on your Windows 11 computer.

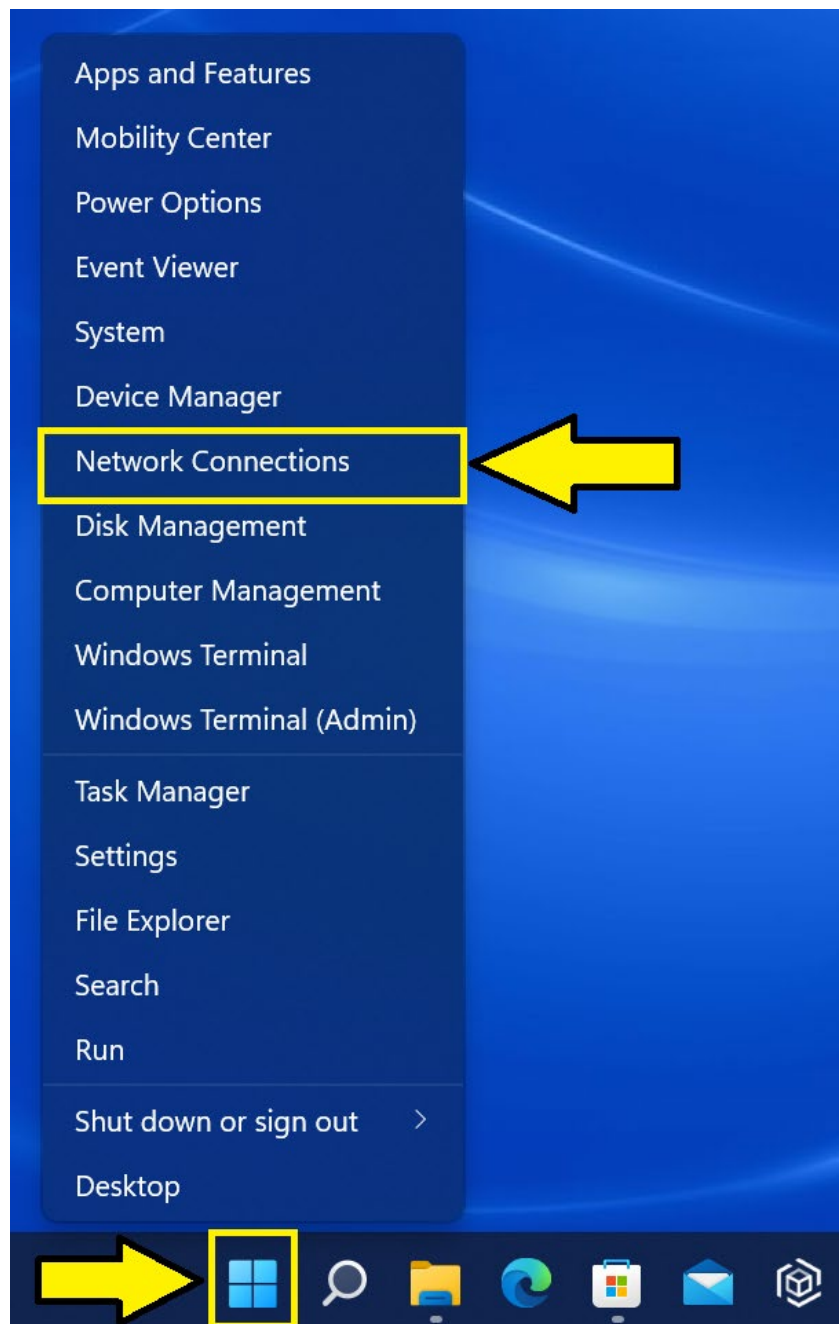

5. If the following prompt is shown, you may either choose “No, thanks” to finish the installation, or click on “Sign in” to log in with your Office365 account or Microsoft Live account. If no prompt is shown, please close out the store window and continue with the configuration of the VPN.

Configuring the VPN

1. Once the VPN is installed, access your Network Connection settings by right-clicking the “Start Menu” icon, and from the resulting menu that appears, click on “Network Connections”.

OK Cancel

Yellow arrows point to the email field, the password field, and the OK button.

11. Once your VPN connects for the first time, your VPN is now ready for regular use and you may click on the “Disconnect” button to disconnect from the VPN.

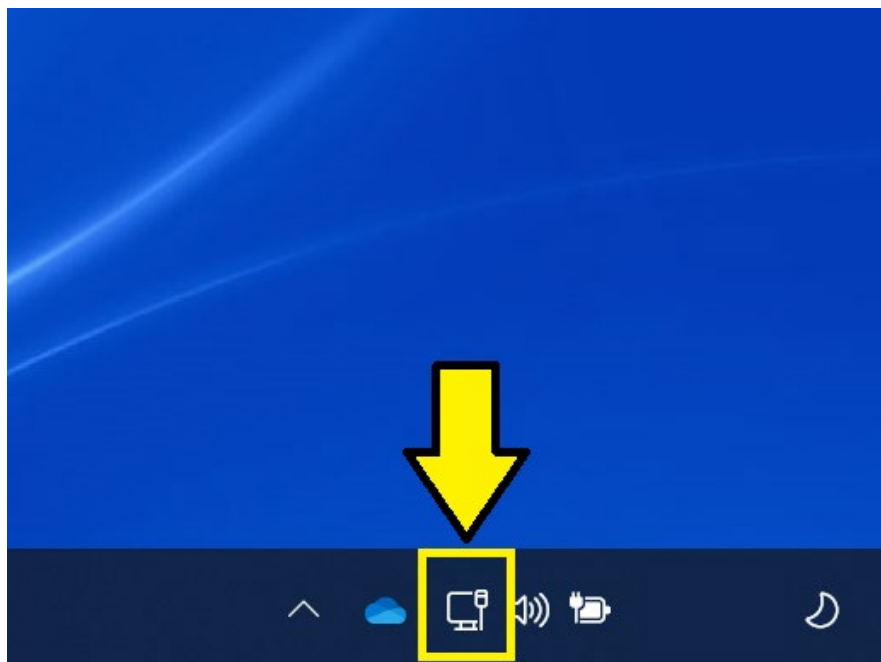

Connecting to the VPN

1. After configuring the VPN, on the bottom right of your taskbar, locate and click on your “Network” icon to bring up all available networks. Depending on what you are using to connect to the internet, the icon may be a...
 - a. **Wireless Network** – If you are using the Wi-Fi functionality of your machine

Or...

- b. **Physical Network** – If you are connected to the network using an Ethernet cable.
