Introduction

What is descriptive metadata?

Metadata means simply "data about data". Descriptive metadata is contextual data about the digital and analog object and often documents the intellectual, physical and virtual characteristics of the object. Metadata is used for the indexing, discovering, and identification. Therefore consistent terminology and field designations are essential for uniform search and retrieval results.

A descriptive metadata record serves several functions, including, user discovery of an object, access to an object and the management of an object. In response to these objectives, librarians, archivists, collection managers and visual and digital specialists have develop several types of descriptive metadata schemas including, CCO, CDWA Lite, MODS, EAD, VRA Core 4.0 and Dublin Core. These national and international schemas are design to gather descriptive metadata in homogeneous and consistent manner based on content or professional methodology to insure interoperability.

Purpose of VRC's Descriptive Metadata Dictionary

The purpose of this dictionary is to define VRC's descriptive metadata schema and guide the VRC staff (staff & students) through the catalog process. The dictionary includes: intent of the dictionary; database functionality, database construction, field definitions, lexicon or lexicon conventions, and data entry rules. To insure future interoperability VRC metadata fields have been mapped to national and international library and museum metadata schemas.

Arrangement of Descriptive Metadata Dictionary

Since the catalog process will be executed both by professional staff and students, the dictionary is arranged in accordance to the database structure.

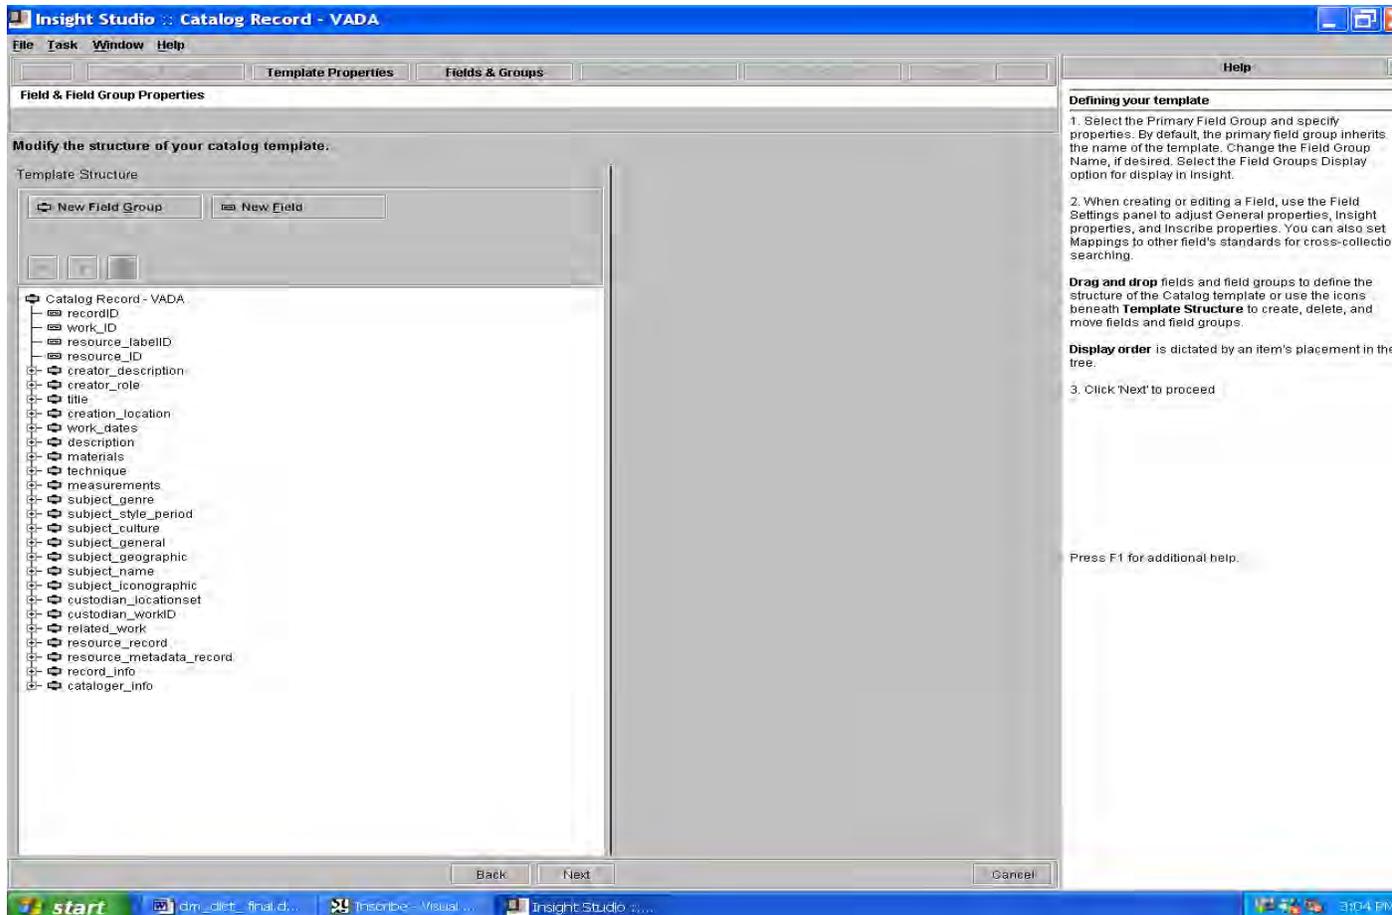

Database Construction

A database is a powerful tool that holds and extracts data. Typically, database comprise of a series of related tables in which data is stored. An easy way to think about databases construction is to envision a table comprised of columns and rows. Each column represents a field, each row represents a catalog record and the intersection of the column and the row is called a cell which holds the data. In the LUNA Insight Studio application a descriptive metadata record is organized in record groups, field groups, and fields.

Catalog Record – VADA

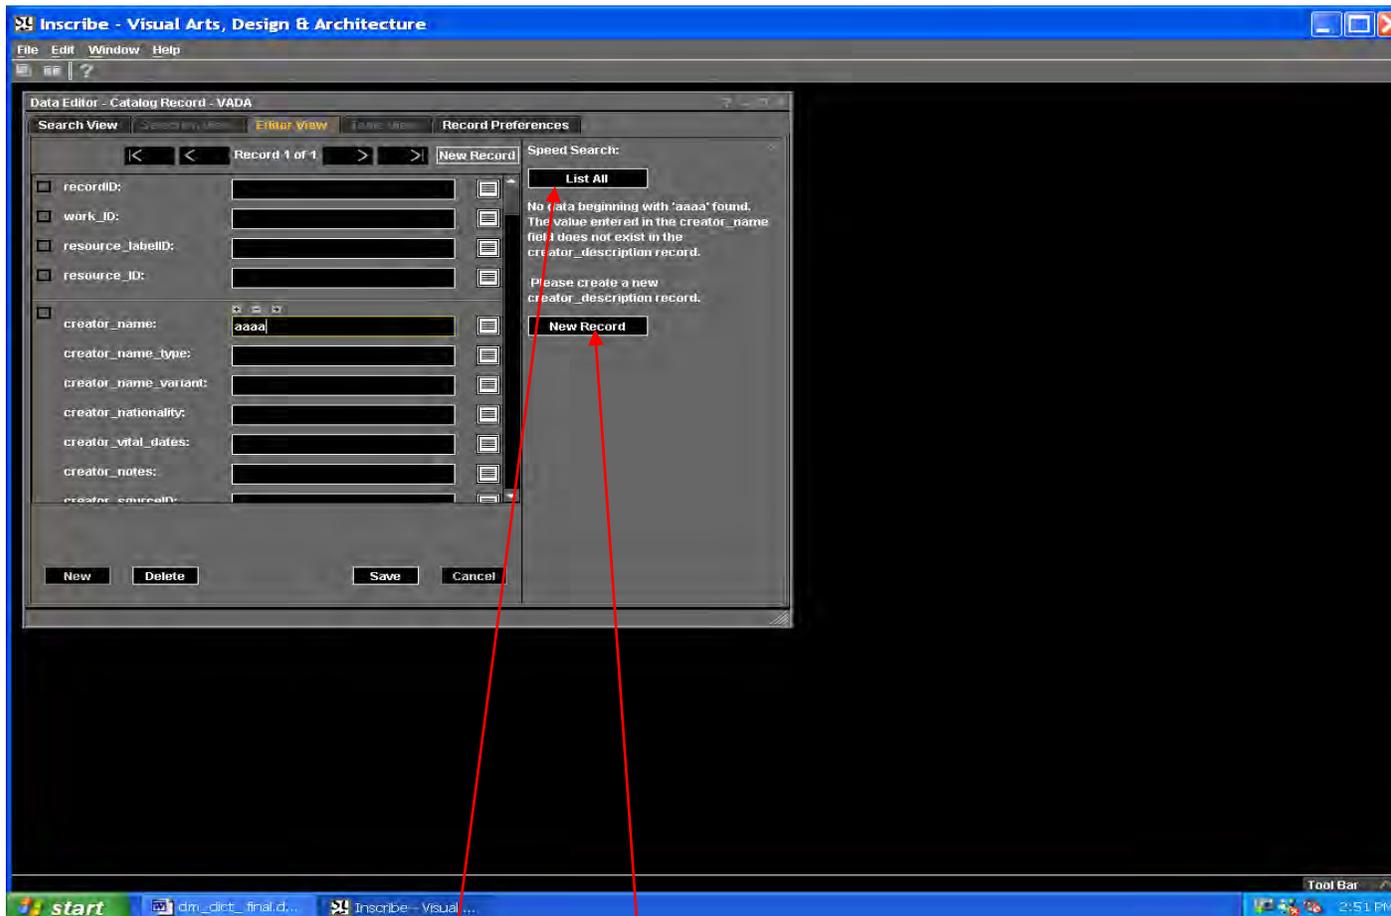

The descriptive metadata is stored in a single record group identified as *Catalog Record - VADA*. Within this record group are three main field groups: *work_record* group, *resource_record* group, and *resource_metadata_record* group.

- The *work_record* group holds data that pertains to the management of the descriptive metadata record and the work represented by the digital or analog resource (not the view, topical, geographic and name access points; links to other related works).
- The *resource_record* group holds data related to the view depicted in digital and analog resource and not the general work.
- The *resource_metadata_record* group is data that relates to the digital object itself and includes: identification, physical or virtual location of digital object (URI); origin and rights of the digital object; along with administrative and technical metadata links or information.

Field Groups (i.e. authority records)

Within the record groups are field groups (authority records) which constitute a collection of fields with related content. Some of these field groups are link to a separate authority records (separate record ie. table); others are together for efficient workflow. LUNA has two types of field groups; independent and dependent. Independent field groups (i.e. catalog records) are used when field content relates to each other. It also allows the cataloger to access and manage this information separately from the main catalog record. Dependent field groups are used if fields need to be duplicated within a work record.

Please note: If the term entered in the field is new, Luna Inscribe may prompt the cataloger to select a term from the existing *list* or create a *new record*. See screen above.

Data Fields

A data field is the smallest unit within a database structure. Data fields may hold text, narrative, and numeral content along with links to other digital sources including image, stream imagery, music, or other types of metadata.

VRC's field structure is based on CDWA-Lite; an XML schema to describe core records for works of art and material culture based on the Categories for the Description of Works of Art and Cataloging Cultural Objects: A Guide to Describing Cultural Works and Their Images.

Edit/Add/Subtract

Catalog Tools & Instructions

Classification/Nomenclature/Lexicon

(Toolkit – cataloger) (Create kit in Firefox)

The following classifications/nomenclatures/lexicons needed to open before data can be compiled and entered in the Luna database system.

- Getty - Art and Architecture Thesaurus (AAT)
http://www.getty.edu/research/conducting_research/vocabularies/aat/
- Getty - Union List of Artist Names (ULAN)
http://www.getty.edu/research/conducting_research/vocabularies/ulan
- Getty – Thesaurus of Geographic Names (TGN)
http://www.getty.edu/research/conducting_research/vocabularies/tgn
- Library of Congress Authorities (LCAH)
<http://id.loc.gov/search/?q=child+abuse&q=cs%3Ahttp%3A%2F%2Fid.loc.gov%2Fauthorities%2Fsubjects>
- Measurement Conversion -
http://www.onlineconversion.com/length_common.htm
- University of Massachusetts Dartmouth – Library Art _Quick Links
<http://lib.umassd.edu/find/ArtHist.html>
- University of Massachusetts Dartmouth – Journal Search
<http://fx7cd9gx6d.search.serialssolutions.com/>
- University of Massachusetts Dartmouth – Books Search
<http://voyager.lib.umassd.edu/cgi-bin/Pwebrecon.cgi?DB=local&PAGE=First>
- University of Massachusetts Dartmouth – Other Library Resources
<http://lib.umassd.edu/find/gateways.html>
- Cataloging Cultural Objects
<http://vraweb.org/ccoweb/cco/examplesindex.html>

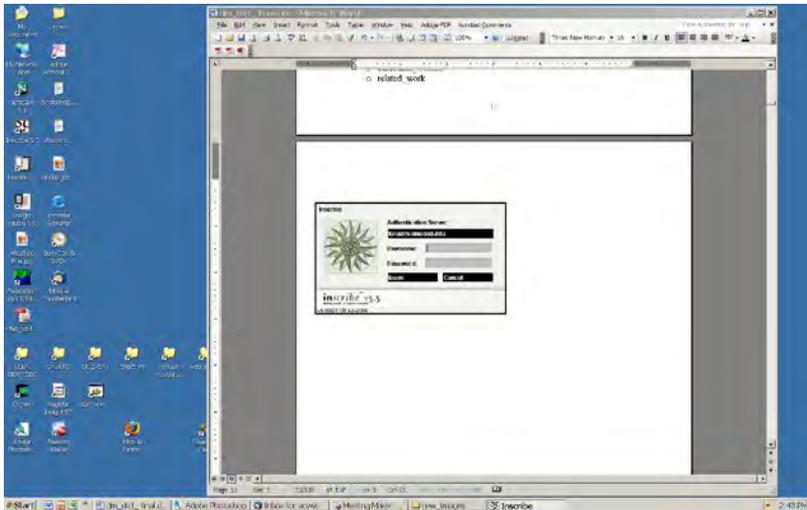

To open automatically the above links complete the following steps.

- Double click on internet browser (Firefox) on desktop
- Click on bookmark on top toolbar.
- Click on toolkit cataloger folder
- Click on open all tabs.

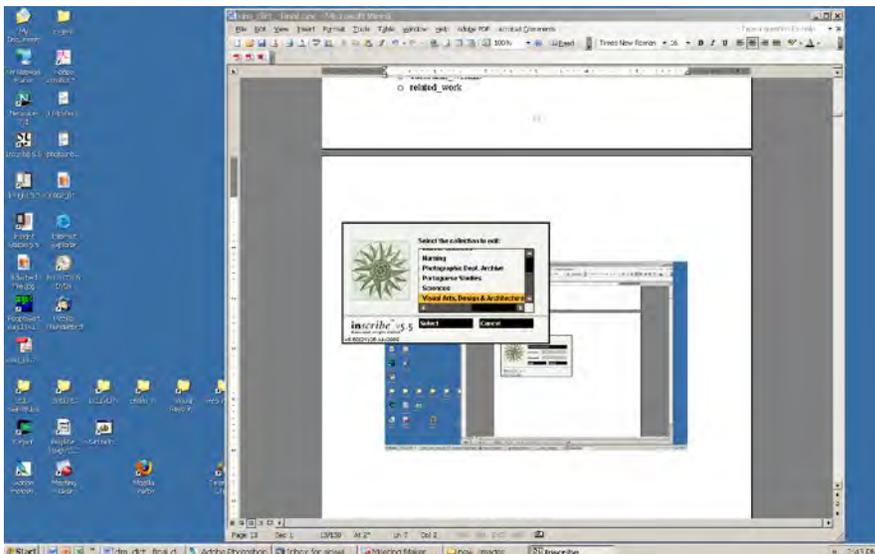

Launch LUNA Inscribe (Cataloging Database Application)

- Double click on the Inscribe icon **Inscribe 5.5.lnk**
- Log on using your LUNA name and password. (see curator)
- Enter

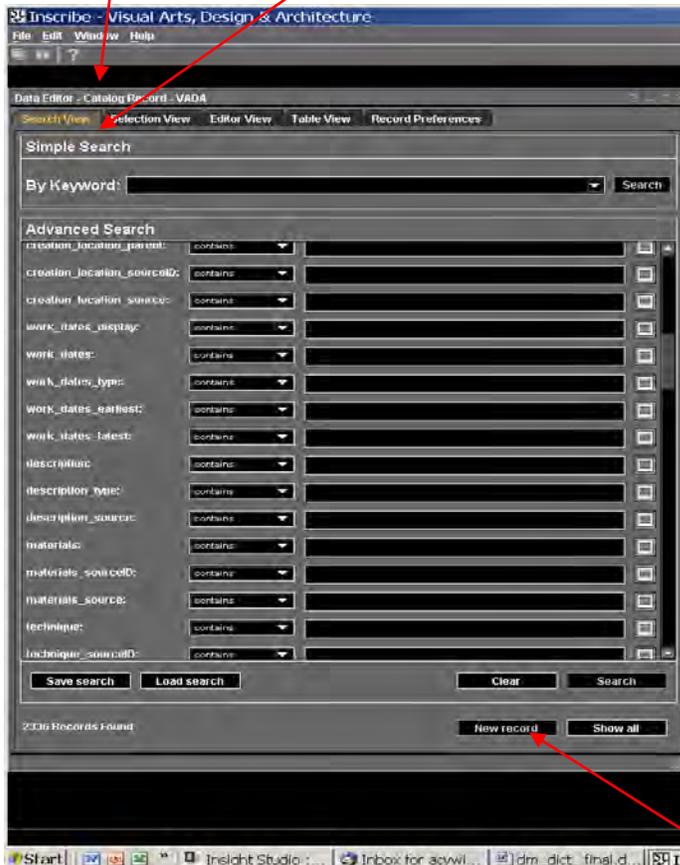

- Click on Visual Arts, Design and Architectural Collection

A Catalog Record appears, as indicated by the Label “Catalog Record – VADA”

- Use the “Search View” window tab to search for existing records.

“New Record” Button

A Simple Search Example:

Enter a name, i.e., Ansel Adams in the “By Keyword” field
-click on Search button

The message “Searching” will appear in the bottom left corner.
If no records are found, the message “0 Records” will appear.

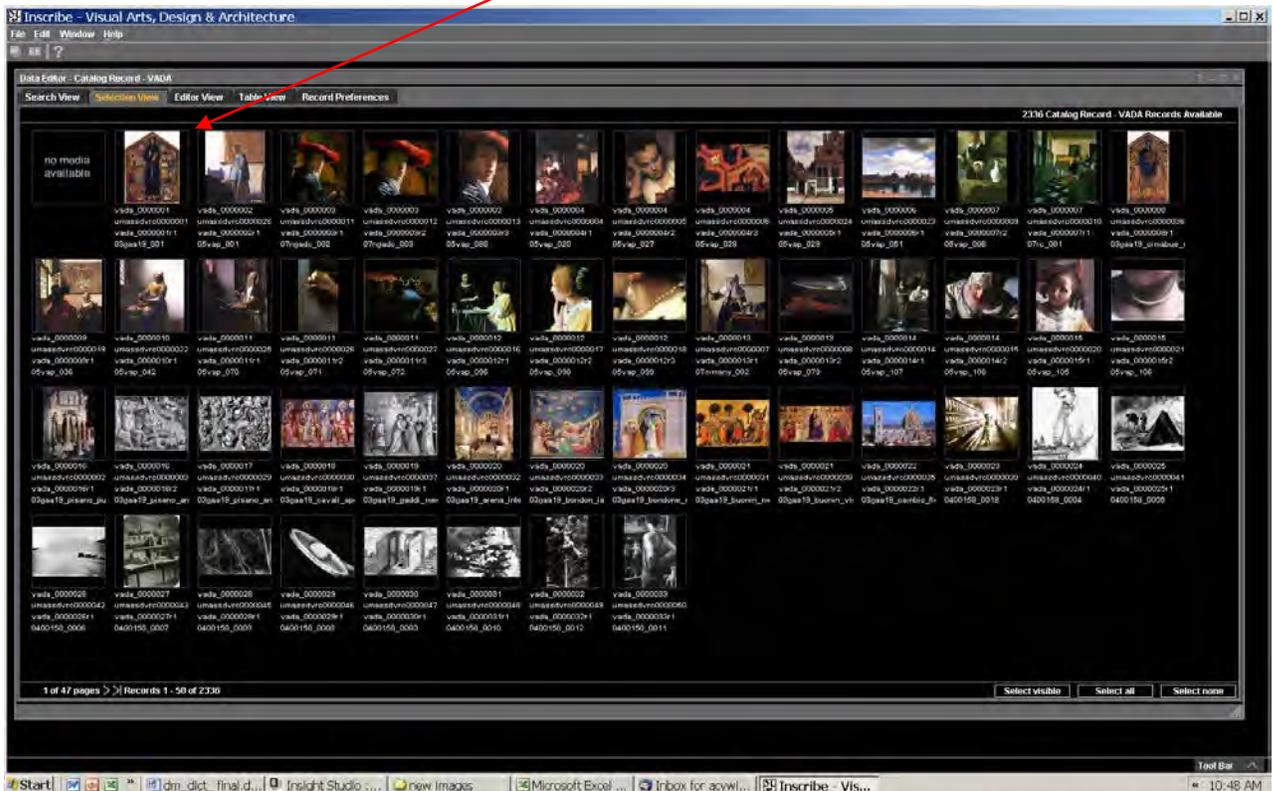

Otherwise, the message that Luna is “Assembling ...” appears, followed by the number of records found.

Luna provides three cataloging views: a Selection view, a Table view, and an Editor view.

Click the Selection View tab:

The *Selection view* (shown below) will appear with content that matches your search criteria. This allows the cataloger to view and select a group of images.

Selection View

-Here you can select individual images by clicking on each image you want. Click on a previously selected image to deselect it.

or

-Click the Select None Button to deselect all the images in the search

or

-Click the Select Visible Button to select all the images on the current page, or

or

-Click the Select All Button to select all the images in the Search results across multiple pages

-The selected number of records will appear in new window depending on the tab you choose:

If you click the Table View tab, the following type of window will appear:

Table View

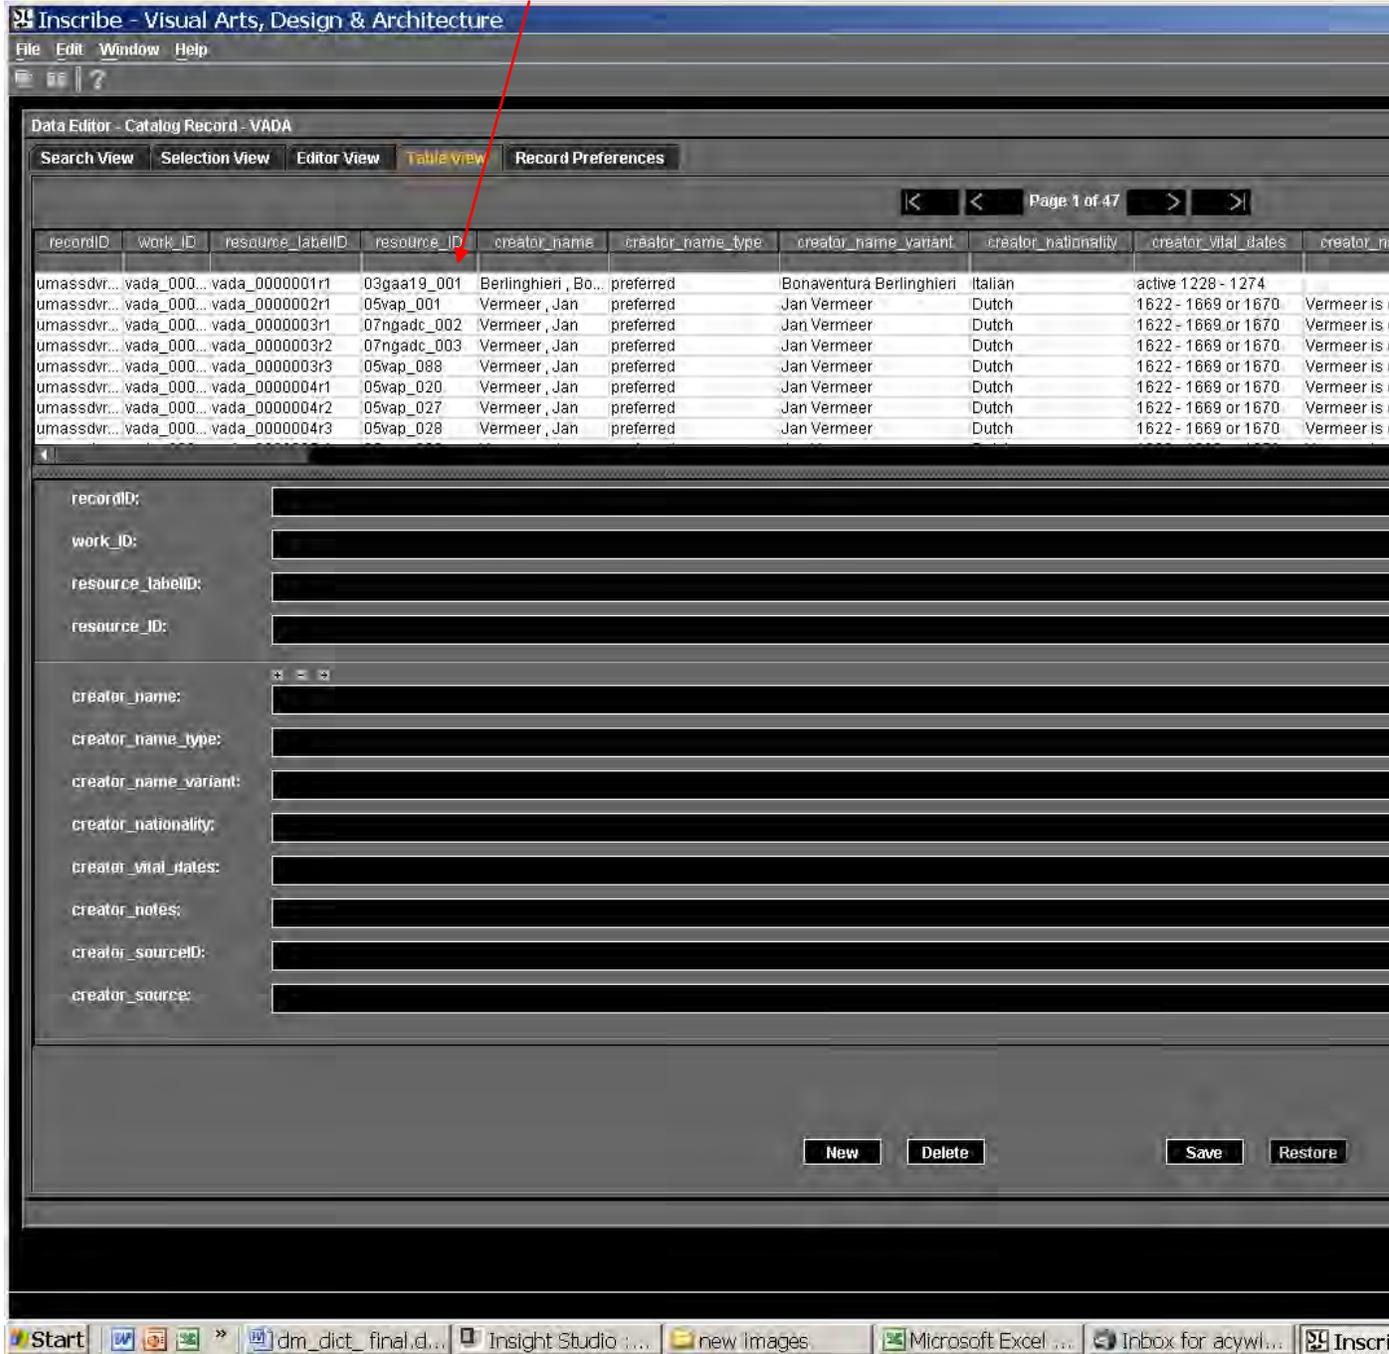

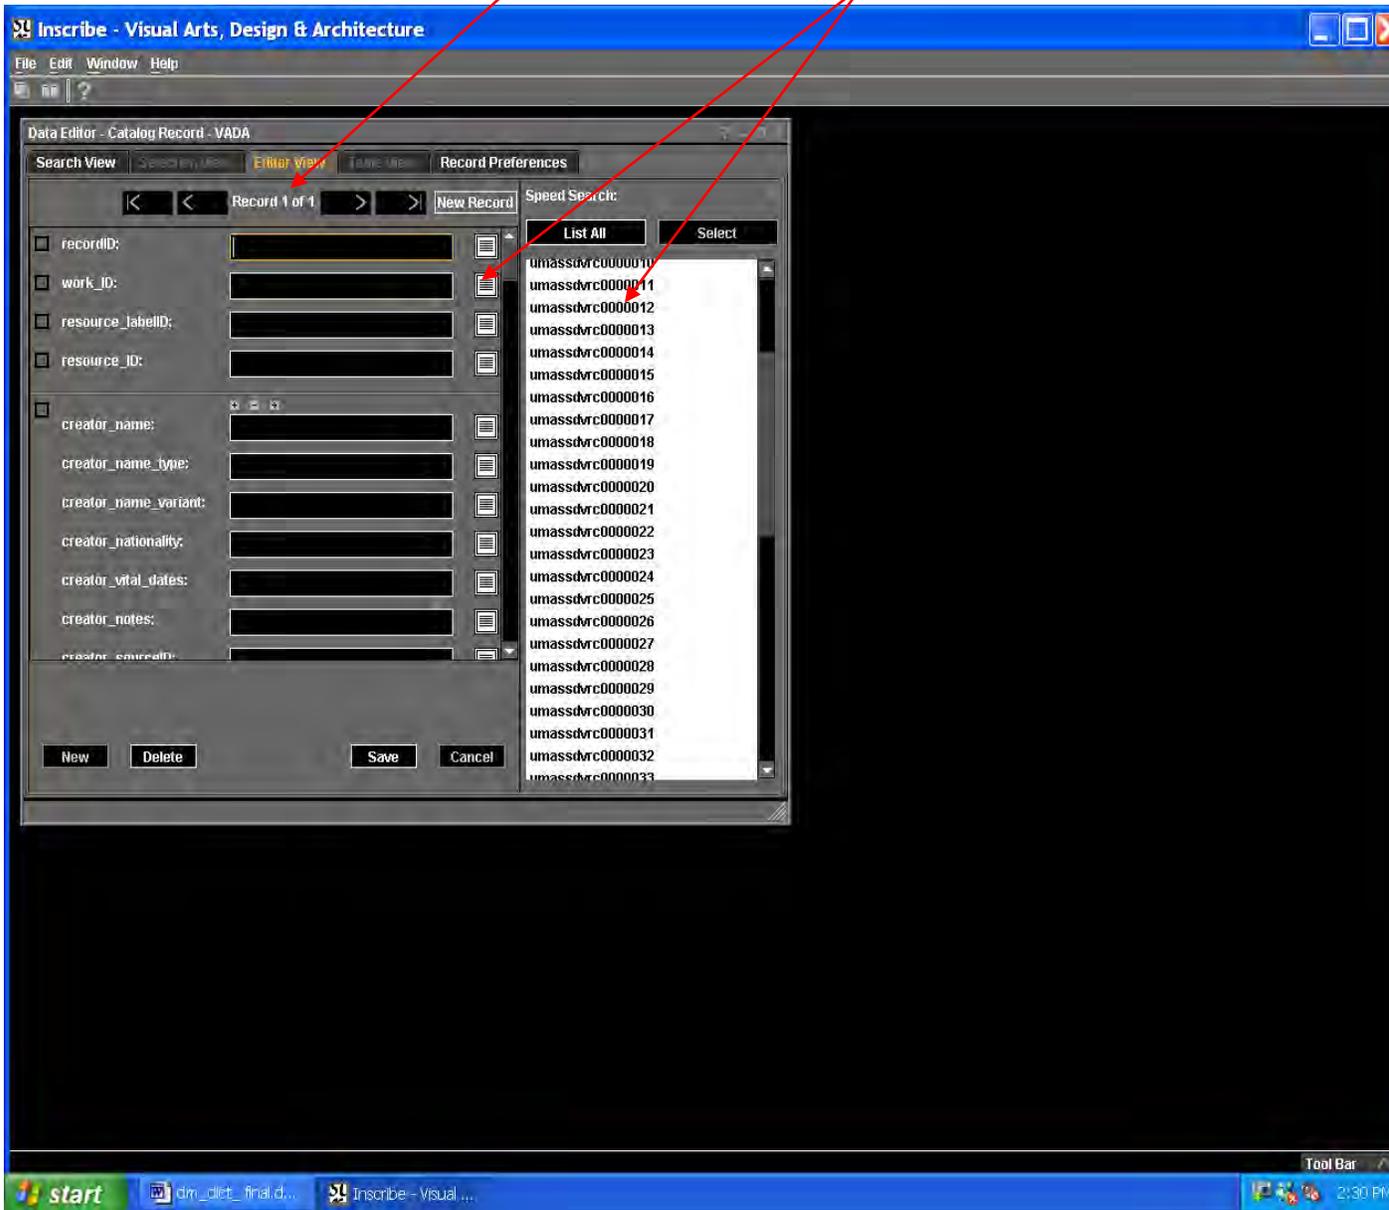

Table view allows the cataloger to view multiple data records at one time.

If you click the Editor View tab, a window (similar to the blank record shown below) will appear:

The *Editor view* allows the cataloger to view or create one record at a time. For the purpose of this dictionary (and most of the time in Luna), you will be working in the *Editor view* screen. You will click in a blank box next to a field and follow the dictionary instructions. Please note: A *drop down* list is associated with many fields. You must select from a drop-down list or create a new authority record.

Editor View

Before you can begin to catalog, there is an important type of record, you need to understand. This is called an authority control record.

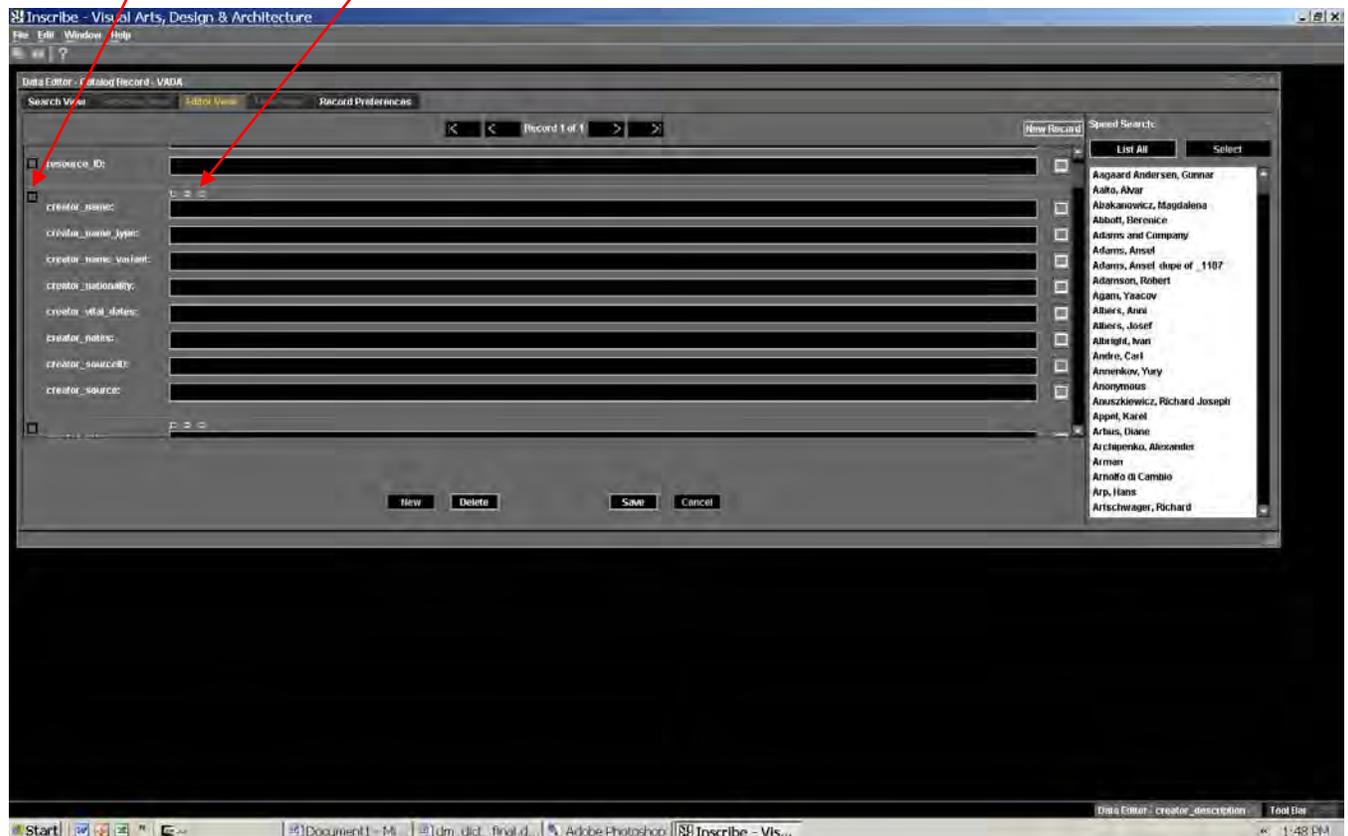

What is an authority control record?

The key to a successful and effective database system is the quality of the data. Authority files provide a uniform methodology for data classification and definition. An *authority file* serves five main functions.

- disambiguates items with similar or identical headings
- maximizes search, browse and retrieval by providing uniformity.
- creates a syndetic structure that guides the user to the materials sought.
- increases productivity both locally and globally by eliminating duplication and redundancy.
- insures interoperability

Recognizing an Authority Record within LUNA Inscribe. Authority records are much like sub-database within the main database. In the example below, the authority record is separated with greyed lines demarcating the field group and has a **single check off box** in the **upper left corner** of the field group.

It also has a plus, minus and **arrow** button above the first field within a field group. The arrow button is a link to the sub-database which holds the authority records.

Let's use the creator_description Field Group Authority record shown as an example:

- type in the first few letters of an artist's last name
- press the Enter key.

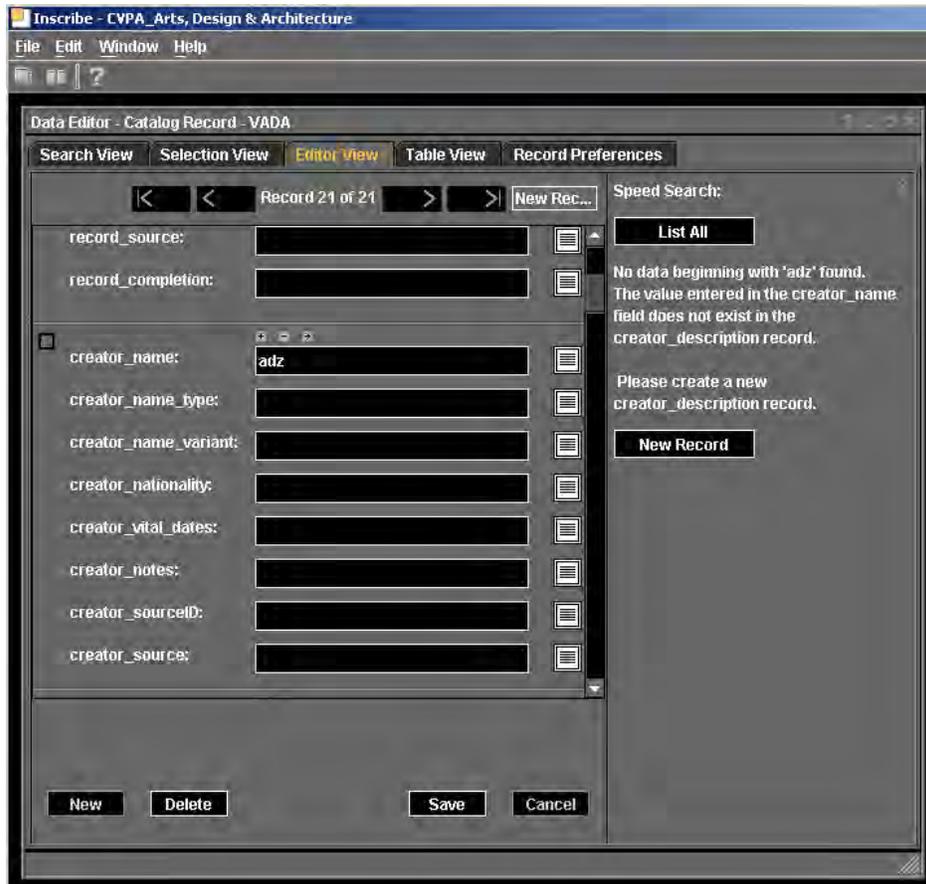

A window called the Speed Search will open on the right and display all the existing authority records that match what you typed into the field.

- If the artist's name appears in the speed search window, double-click on the name in the list.

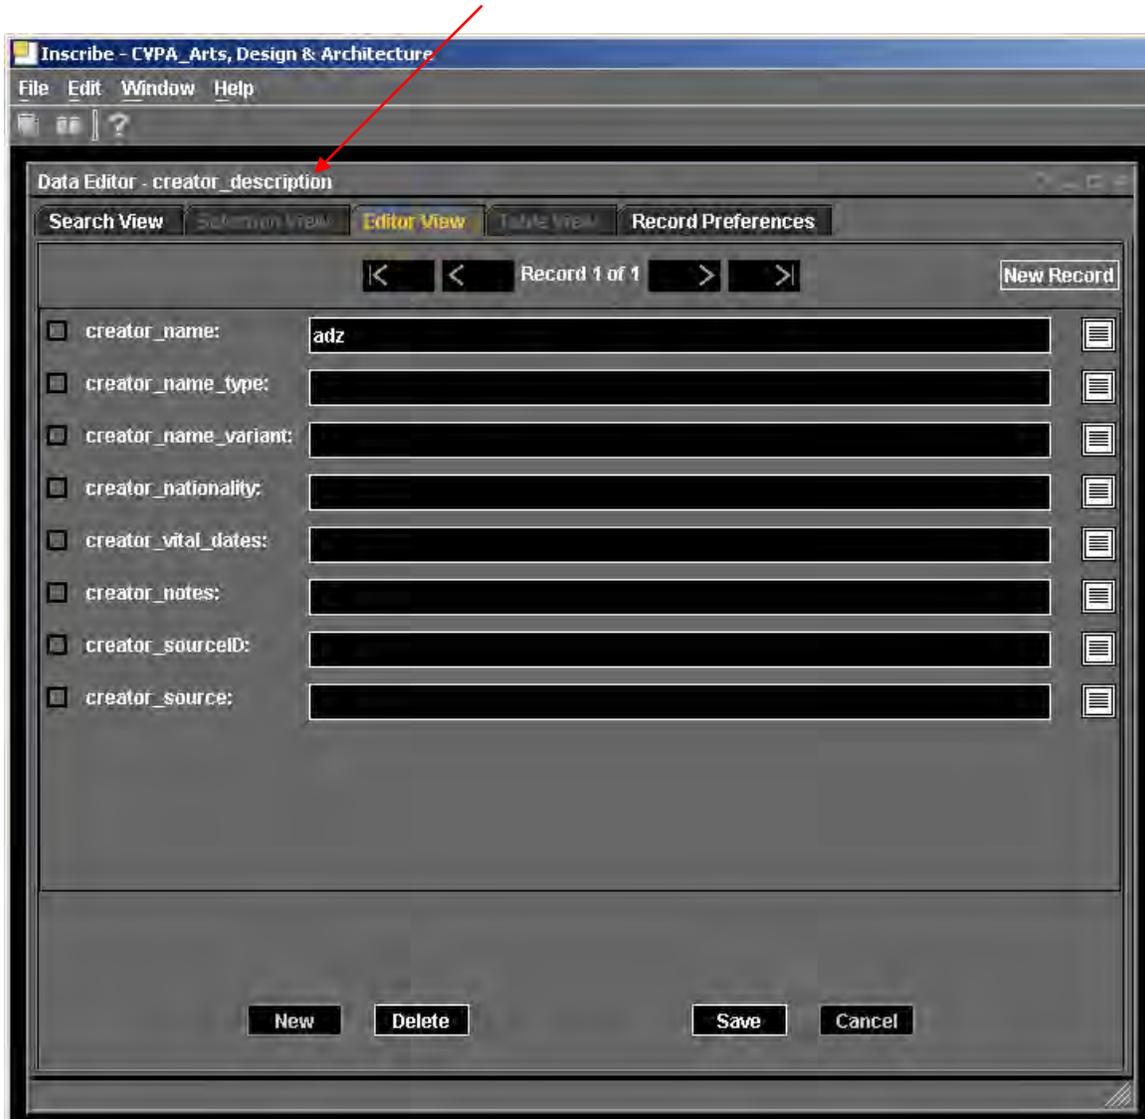

This will place the name and all the accompanying information about the creator_description field group that was previously saved in the authority record.

- Click in the next field to continue cataloging.

If the artist's name does not appear in the Speed Search list, the following message will appear in the Speed Search area and you will have to create a new Authority Control Record by clicking the New Record button.

After you have clicked the New Record button, the text that you typed into the previous catalog record appears in new a creator_description record.

You can now type data into all the fields associated with the creator_description field group.

When you have finished

- click the Save button
- click the Close box to return to the Catalog Record.

Editing Authority Records – (ship)

Log-IN

- Open to “Search View” tab
- Click “New record” (LR corner of screen)
- Click “Edit View” tab
- Go down to the creator _name field
- Click on the arrow above data entry box

Authority Records – Creator Description

- New window entitled “Data Editor– creator description”
- Click “Show All”
- Click “Edit View” tab
- Edit record using Getty’s *Union List of Artist Name* lexicon.
- Complete creator name authority record.
- When record is completed click “Save”

(This process applies to all authority records within the LUNA Inscribe (cataloging program.)

Catalog Record VADA (Work Record Group)

The *catalog record_VADA* begin with four key fields: *resource_ID*, *record_ID*, *work_ID*, and *label_ID*.

Please Note: The data in these fields are vital to the database construction and management of the digital assets. Therefore, care must be taken when entering data. It is critical, may I repeat critical, that the data entered in these fields be unique and be completed for each catalog record. Otherwise your hard work will be useless.

Important: Save after each of the four key fields is entered. This will insure that your data (number) is unique and will prevent other catalogers from utilizing your data (number).

Catalog Record VADA:

Field names:

- resource_ID
- record_ID
- work_ID
- label_ID

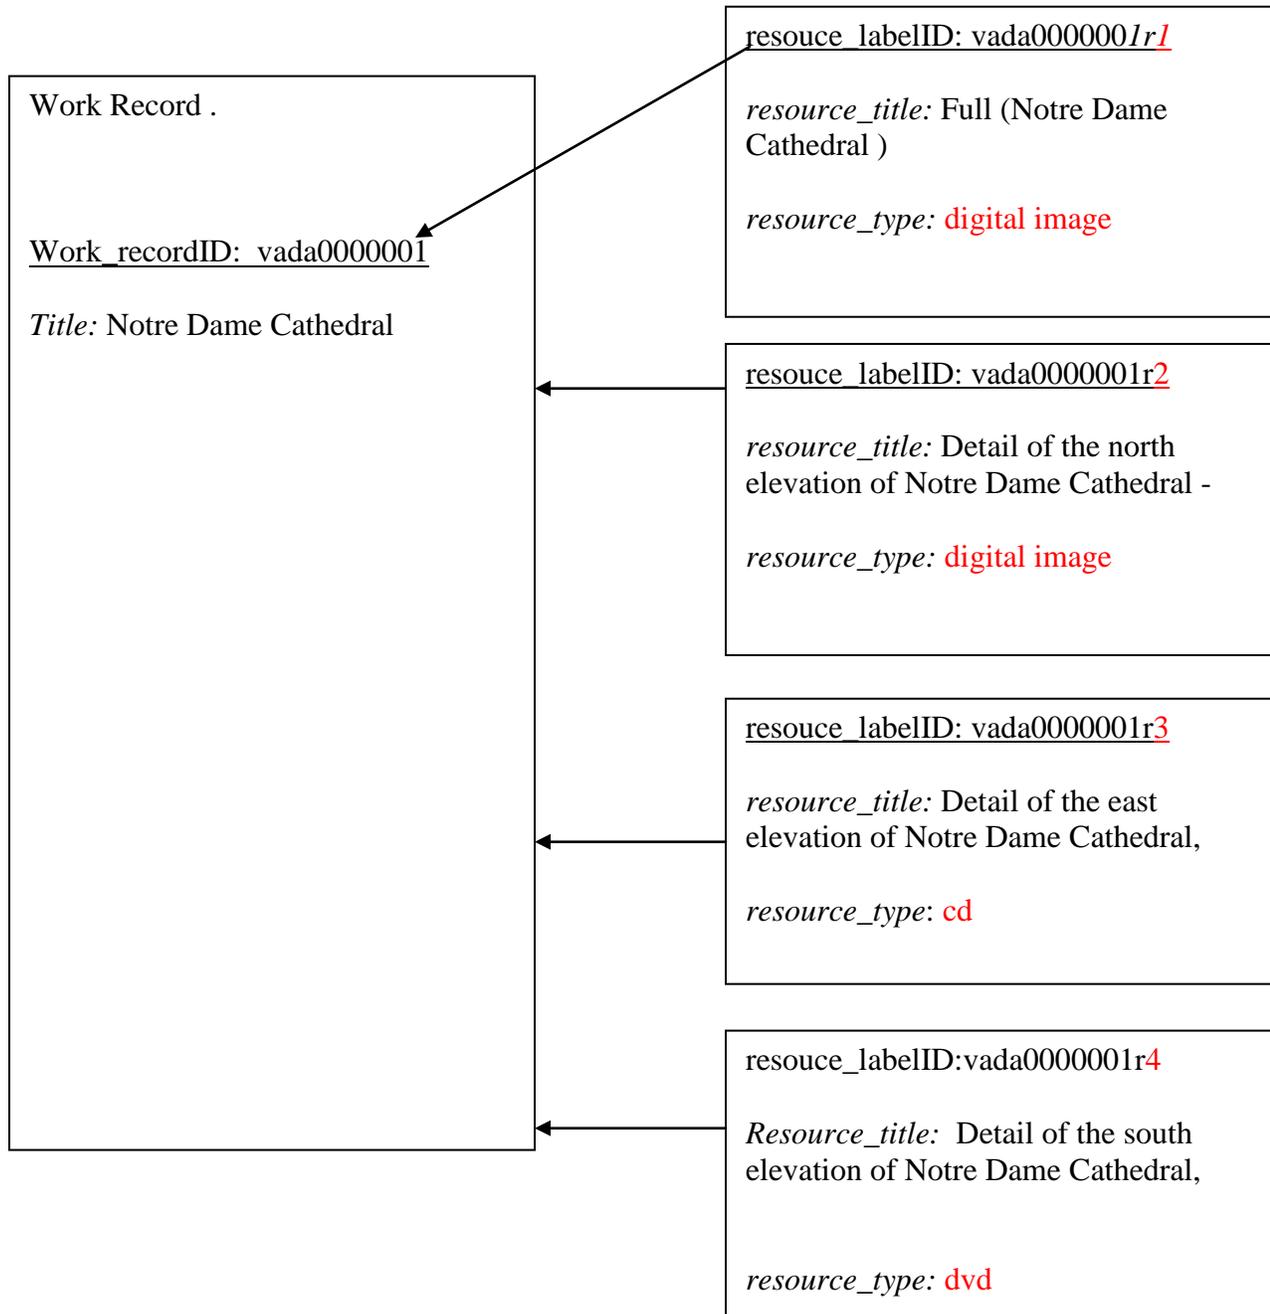

<p>Record Group: Catalog Record VADA Field Group: Work Record Field Designation: Core</p> <p>Field Name: resource_ID Field Definition: A unique code that maps the digital image to the record.</p> <p>Important: Use the filename as the convention minus the file extension. Catalog Record Group

The next set of fields describes the context and characteristics of the actual work depicted by the digital object(s) in the database. They are used to assign intellectual access points that can be used to search and retrieve the digital object.

Field groups allow related content to be linked to each other. Some field groups function as an authority record. As previously described, an authority record is a collection of related information that is entered as a group when chosen from the Speed Search window.

As previous noted under Catalog Tools and Information, the VRC has adopted national taxonomies have been widely adopted and employed. As you may recall, these are available as the “catalog toolkit,” and can be found in the Firefox browser under the Firefox bookmark tab for “catalog toolkit.” Note: Be sure to choose open all tabs.

The following fields are part of the Catalog Record Group:

Work Record Group

- creator_description
- creator_role
- title
- creation_location
- work_dates
- description
- materials
- technique
- measurements
- subject_genre
- subject_style_period
- subject_culture
- subject_general
- subject_geo_place
- subject_name
- subject_iconographical
- custodian_locationset
- custodian_workID
- related_work`0

creator_description
(Field Group- Authority)

The *creator_description* field group pertains to the artist (creator, author, maker, or responsible party) who created the work represented by an image, audio or multimedia digital resources. The descriptive metadata includes name, name variants and biographical information.

Field group creator_description:

Field names:

- creator_name
- creator_name_type
- creator_name_variant
- creator_nationality
- creator_vital_dates
- creator_notes
- creator_sourceID
- creator_source

<p>○</p> <p>Record Group: work Field Group: creator_description Field Designation: (CORE)</p> <p>Field Name: creator_name Field Definition: Record the official and legal name of the person, the corporate, the group, the school, the family or the responsible party for the creation of the original work.</p>	<p>Field Attributes:</p> <p>Behavior</p> <ul style="list-style-type: none"> ○ Type of field? text ○ Link- authority record? – yes ○ Link– controlled voc? -yes ○ Link – to another field? no ○ Link- drop down list? - yes ○ Link - automatic - voc? – no ○ Data entry? - yes ○ Required field? yes ○ Validation field? yes ○ Repeat field? yes <p>Access</p> <ul style="list-style-type: none"> ○ Keyword searchable? - yes ○ Use in data field search? - yes ○ Display field? yes

title
(Field Group)

The *title* field group records the name, phrase or term that identifies the work represented by the digital resource objects. Title is assigned often by the creator of the work, but in some cases, by the owner of the work or by the repository. Verify title via the artist or repository of the original work. Titles may be descriptive, or anecdotal in nature.

Field Group title:

Field names:

- title
- title_type
- title_variant
- title_source

<p>Record Group: work Field Group:: title Field Designation: (CORE)</p> <p>Field Name: title Field Definition: The title or descriptive phrase is given to the original work depicted in the image. For complex works or series, the title may refer to a discrete unit within the larger entity (a print from a series, a panel from a fresco cycle, a building within a temple complex) or may identify only the larger entity itself. A record for a part of a larger unit should include both the title for the part and the title for the larger entity. For image that is a detail of a larger work record the full title of work.</p> <p>Please note: When artist is not identified then main entry becomes title.)</p>	<p>Field Attributes: Behavior</p> <ul style="list-style-type: none"> ○ Type of field? text ○ Link- authority record? – no ○ Link – controlled voc? - no ○ Link - drop down list? yes ○ Link - automatic - voc? – no ○ Data entry? - yes ○ Required field? no ○ Validation field? no ○ Repeat field? yes <p>Access</p> <ul style="list-style-type: none"> ○ Keyword searchable? yes ○ Use in data field search? yes ○ Display field? work_dates
(Field Group)

The *work_dates* field group designates the dates associated with the creation of the original work represented by the digital or analog resource. In order to make the date searchable and interoperable, VRC has established multiple date fields to ensure usability. It is critical that date rules of entry are followed and expressed accurately. Any questions ask the curator.

Field group work_dates:

Field names:

- work_dates_display
- work_dates
- work_dates_type
- work_dates_earliest
- work_dates_latest

<p>Record Group: work Field Group: work_dates Field Designation: (CORE)</p> <p>Field Name: work_dates_display Field Definition: Record the year, span of years, or phrase that describes the specific or approximate date of the work (depicted) was created.</p>	<p>Field Attributes: Behavior</p> <ul style="list-style-type: none"> ○ Type of field? text/ limited ○ Link- authority record? – no ○ Link– controlled voc? no ○ Link – to another field? no ○ Link- drop down list? - no ○ Link - automatic - voc? – no ○ Required field? - yes ○ Validation field? - no ○ Repeat field? - no <p>Access</p> <ul style="list-style-type: none"> ○ Keyword searchable? -yes ○ Use in data field search? - yes ○ Display field? - yes

description
(Field Group)

The *description* field group describes the content and/or context of the work represented by the image, audio or multimedia digital resources. The “description” fields may be a descriptive, an interpretation and historic note. Descriptive serves as a means to add keywords or phrases for easy search and retrieval so choose your words carefully and be mindful of the end user. You want to be able to find the source.

Field group description:

Field names:

- description
- description_type
- description_source

materials_reference
(Field Group - Authority)

The *material_reference* field group describes the physical characteristics of the work represented in the image, audio and multimedia digital resource. Materials represent the medium/materials applied and the support used to create the work and not the methodology, technique, or genre.

Field group material_reference:

Field names:

- materials_display
- materials
- materials_sourceID
- materials_source

<p>Record Group: work Field Group: materials Field Designation: (required)</p> <p>Field Name: materials_display Field Definition: Record the material, matter or substance, medium used to create the work and the support. Do not list the process used to create the work except for photography and print when technique and material is often the same. It usually answers the question, “What materials and/or support were used to make the work?”</p> <p>Ex., Oil paint on canvas</p>	<p>Field Attributes: Behavior</p> <ul style="list-style-type: none"> ○ Type of field? text ○ Link- authority record? – no ○ Link– controlled voc? –no ○ Link- drop down list? -yes ○ Link - automatic - voc? – no ○ Data entry? - yes ○ Required field? no ○ Validation field? yes ○ Repeat field? yes <p>Access</p> <ul style="list-style-type: none"> ○ Keyword searchable? - yes ○ Use in data field search? - yes ○ Display field? yes
--	--

Authority Type: none
Classification/Lexicon/Nomenclature Standard: Followed the convention provided by the source.

Standards for Rule of Entry:: CCO

Rules of Entry: Followed the convention provided by the source. The predominant material should be listed first and when appropriate list the support last.

1. Two Dimensional = List medium/media first; followed by the article “on” and then support.

Ex.

- Oil painting on canvas
- Acrylic and watercolor on paper
- Watercolor on board

2. Three Dimensional = List predominant material first

Ex.

- Bronze and plaster on a wood base
- Silver, copper and zinc

measurements
(Field Group)

The *measurements* field group records the dimensions of the work. A measurement includes numerical values, units of measurement, and type of measurement. It also specifies the parameters or extent of the measurement.

Field group measurements field names:

- measurements
- measurement_type
- measurement_extent

<p>Record Group: work Field Group: measurements Field Designation: (optional)</p> <p>Field Name: measurements Field Definition: Information about dimension, size or scale of work depicted in the digital resource. Dimensions express the value, the value type, and the unit of measurement.</p>	<p>Field Attributes:</p> <p>Behavior</p> <ul style="list-style-type: none"> ○ Type of field? text ○ Link- authority record? – no ○ Link – controlled voc? – no ○ Link - drop down list? Subject Access Terms

CCO and VRA recommend subject access terms be recorded in a single index with qualifying fields. From a machine readable approach, this makes a great deal of sense, since a single field index structure allows for most efficient means to search and retrieve keywords. However, from an indexer and report manager perspective this structure can be problematic; especially when discreet information is needed in electronic or print form. With this in mind, VRC has opted to use the MARC21 model and place each type of subject access term in its own authority index.

The “subject” field groups contain terms that identify, describe and/or interpret the work depicted in the digital object. Subject terms may include, people, places, culture, activities, events, abstract shapes, concepts, style and time periods, etc. Subject terms answer two main questions. What is the work of? What is the work about? These terms are selected from national and international lexicons/thesauruses and may be specific to a particular professional or academic discipline or collection. These established lexicons allow for metadata sharing among libraries, archives and database systems and will insure interoperability in the future.

Subject access content is distributed across six field groups.

- subject_style_period
- subject_culture
- subject_general
- subject_geographic
- subject_name
- subject_iconographic

Please Note: When in doubt, leave a field blank. Not all subject groups will apply to all works.

o

<p>Record Group: work Field Group: subject_genre_classification Field Designation: (optional)</p> <p>Field Name: genre_class Field Definition: Record a broad hierarchical term that relates to a particular subclass/category. resource_record
(Field Group)

The *resource_record* field group describes the *view depicted* in the digital and analog object and *not* the object or work.

Please note: For two dimensional works or an exact rendition of the original skip the following fields:

- resource_creator
- resource_view_date
- resource_description
- resource_subject
- resource_coverage

All other fields within the resource_record group must be completed.

<p>Record Group: Catalog Record VADA Field Group: resource_record Field Designation:</p> <p>Field Name: resource_creator Field Definition: Pertains only to analog media or third party digital media. Skip field if the same as work. Leave blank.</p>	<p>Field Attributes: Behavior</p> <ul style="list-style-type: none"> ○ Type of field? text ○ Link- authority record? - no ○ Controlled field? - no ○ Automatic field? – no ○ Link - drop down list field? yes ○ Data entry? – yes ○ Required field? no ○ Validation field? no ○ Repeat field? no <p>Access</p> <ul style="list-style-type: none"> ○ Keyword searchable? no ○ Use in data field search? no ○ Display field? yes
<p>Authority Type: controlled lexicon</p>	
<p>Classification/Lexicon/Nomenclature Standard: ULAN, LCAH or Local Authority.</p>	
<p>Standards for Rule of Entry:: CCO</p> <p>Rules of Entry: Select preferred name from the ULAN. Enter surname, followed by space and comma, space and first name, space and initials, honorifics. Ex.</p> <ul style="list-style-type: none"> ○ Smith(space),(space)John(space) Jr.) <p>Capitalize forenames, initials, surnames and honorifics. If name includes articles or preposition use lower case. Name should be expressed in English.</p>

resource_metadata_record
(Field Group)

The first set of fields within the *resource_metadata_record* field group provides information specific to the digital or analog object, including identifying and locating information, as well as the type of resource. The next set of fields within the *resource_metadata_record* field group pertain to the history of the digital object, including the technical and the administrative metadata.

Field group resource_metadata_history field names:

- resource_filename
- resource_URI
- resource_type
- resource_date
- resource_derivative_class
- resource_format
- resource_repository
- resource_rights
- adm_meta_URI
- adm_meta_note
- tech_meta_URI
- tech_meta_note

<p>○</p> <p>Record Group: Catalog Record VADA Field Group: resource_metadata_record Field Designation: Core</p> <p>Field Name: resource_filename Field Definition: A unique code (filename) assigned to a digital object and includes the file extension.</p>	<p>Field Attributes</p> <p>Behavior</p> <ul style="list-style-type: none"> ○ Type of field? text ○ Link- authority record? - no ○ Controlled field? - yes ○ Automatic field? – yes ○ Link - drop down list field? yes ○ Data entry? – yes ○ Required field? yes ○ Validation field? yes ○ Repeat field? no <p>Access</p> <ul style="list-style-type: none"> ○ Keyword searchable? yes ○ Use in data field search? yes ○ Display field? yes
<p>Authority Type: controlled lexicon</p>	
<p>Classification/Lexicon/Nomenclature Standard: Local - UMassD - VRC</p>	
<p>Standards for Rule of Entry: Local - UMassD - VRC</p>	
<p>Rules of Entry: “Resource_filename” is the filename and extension of the digital object. Ex.</p> <ul style="list-style-type: none"> ○ 05vap_001.tif ○ 06vap_210_f.jpg 	
<p>Metadata Standards Crosswalks</p> <p>CDWA Lite = <cdwalite:resourceID></p> <p>VRA 4.0 = < IMAGE><id></p> <p>CCO = n/a</p> <p>CDWA Luna: n/a</p> <p>CDWA = related visual documentation – repository number</p> <p>Dublin Core= n/a</p> <p>MODS = <url></p> <p>MARC 21= 856 \$u</p> <p>EAD =</p>	

<p>Record Group: Catalog Record VADA Field Group: resource_metadata_record Field Designation: (CORE)</p> <p>Field Name: resource_URI Field Definition: Record the digital files uniform resource identifier (URI). The browser (computer) uses URI to identify the location of a single digital file. TO BE DETERMINE</p> <p>For example. c:\(computer hard drive)\visual resource collection(folder)\user services(folder)\photomasters(folder)</p> <p>c:\visual resource collection\user services\photomasters</p> <p>Skip.</p>	<p>Field Attributes</p> <p>Behavior</p> <ul style="list-style-type: none"> ○ Type of field? text ○ Link- authority record? - ○ Link – controlled voc? - ○ Link - automatic - voc? – ○ Link - drop down list? ○ Data entry? - ○ Required field? yes ○ Validation field? yes ○ Repeat field? no <p>Access</p> <ul style="list-style-type: none"> ○ Keyword searchable? yes ○ Use in data field search? yes ○ Display field? staff
<p>Authority Type: controlled lexicon</p>	
<p>Classification/Lexicon/Nomenclature Standard: local</p>	
<p>Standards for Rule of Entry: local</p>	
<p>Rules of Data Entry: This standard should be generic to insure future migration.</p>

Glossary

Authority:

Core:

Data entry: Text must be entered by hand.

Database: wedopedia

Descriptive Metadata:

Field: Is a discrete unit of information. A space allocated for a particular item of information.

Field - Authority Field:

Field - Authority Link: A field is link to an authority file.

Field - Authority: Terminology

Field – Automatic: Field content is automatically loaded by the computer.

Field –Controlled: Field has specific content or format and is usually associated with a controlled lexicon/lexicon/authority list.

Field - Definition: Describe the type of content associated with the field.

Field - Drop down list: field with associated with a list of terms, and/or phrases.

Field - Element: Is name declaration of a field.

Field - Lexicon:

Field - Repeatable:

Field -Required: Content is required before computer willing the field must be completed before moving on to the next field.

Field -Type: Field are designated to five categories: core, link, authority, index, source

Field - Validation:

Lexicon –Serves as a thesaurus and/or index of terms restricted to a specific field.

Link

Record – A collection of fields are called a record.

Record – Catalog

Record – Authority:

Record – Brief:

Record – Dependent:

Record – Full:

Record – Staff:

Record – Work: Catalog content relates to the item depicted in the digital or analog image.

Record-Digital Metadata: Catalog content relates to the digital or slide surrogate/derivative

Record – Digital Metadata History -

Record- Info: A conceptual group of fields that describes a work or image that comprise of a catalog record within a database system.

Record-Cataloger_Info

Record – Digital R

Rule of Entry: A specific protocol that the data entry must be performed or expressed.
